Dear Hiring Team,

I am applying for the Full Stack .NET Developer role at Beepo. I bring strong experience in building scalable, secure, and cloud-ready applications, I have a solid background in backend architecture, frontend development, and DevOps

Currently, I work as a Tech Lead at Catalyx Solutions, where I architect and lead development of security automation platforms. I design scalable APIs, manage CI/CD pipelines, and maintain cloud infrastructure to ensure high availability and performance. Previously, as a Software Engineer Intern at Kloudtech, I built secure SaaS features and optimized deployment workflows, reducing release times by 20%.

While my recent work is focused on Node.js and cloud-native systems, my experience strongly translates to the .NET stack: RESTful API design, MVC-based architectures, ORM usage, clean code practices, and secure authentication flows. I have extensive hands-on experience with React (hooks, state management, modern JS), cloud deployments, containerization with Docker, and CI/CD—matching your requirements for full-stack development, Azure-based infrastructure, and DevOps collaboration. I am comfortable working across Linux and Windows environments and adapting quickly to Azure services and ASP.NET Core.

I thrive in remote teams, communicate clearly with both technical and non-technical stakeholders, and consistently deliver within timelines. Beepo's focus on work-life balance, strong culture, and long-term growth aligns well with my career goals, and I'm excited about the opportunity to contribute to your clients' success.

I would welcome the chance to discuss how my skills and experience can add value to Beepo.

Sincerely,

Kent Harold Belen
